

# eChart MANITOBA

**Information is  
the best medicine**

## What is eChart Manitoba?

eChart is a secure, electronic system that connects authorized health-care providers with a summary of your health information such as drug prescriptions that have previously been filled, immunization histories and results from participating labs.

### When your health information is connected you get better care

Because your key health information is available to your authorized health-care providers, it can be reviewed when you require care and minimizes the chance of unnecessary and duplicate tests. With access to your up-to-date lab results, prescriptions, immunizations, x-ray and ultrasound reports, you'll get the most informed health care from the providers you rely on.

### With eChart, your information is in safe hands

Access to your key health information is limited to providers who are involved in your care. This means you can be confident that your information is safe and secure. You can request to see what information is held about you, who has viewed your record, and you can place a Disclosure Directive on your eChart record.

### eChart will help to:

- Improve the quality of your care
- Connect health-care providers with secure access to your key health-care information
- Present information from multiple electronic health systems in one place
- Reduce duplication and unnecessary tests

## What is a Disclosure Directive?

A Disclosure Directive hides your personal health information in eChart from being seen by health-care providers – except for your name, personal health identification number, date of birth and address. You have the option of placing a Disclosure Directive on your eChart record; however, you should know this will hide all clinical information about you. As a result, health-care providers will be unable to see any of your clinical information stored in eChart when they are providing you with care.

Certain health-care providers who have the highest level of access to eChart Manitoba may temporarily override a Disclosure Directive in order to obtain relevant information to provide safe, quality care – but they must indicate the reason for doing so.
