

# Transfusion Perinatal Labs Quick Reference Guide

*Disclaimer: All data is fictitious and for training purposes only.*

Transfusion medicine and perinatal results performed by Canadian Blood Services and Shared Health Diagnostic Services are available in eChart. The results are sent every 10 minutes and will display under the Labs: Transfusion-Perinatal list pane.

CBS abnormal results will not be flagged. It is recommended that users review the full comment associated with the result at the collection and result level. Status changes of “Correction”, “Amended” and “Supplementary” are shown in the comments section. Perinatal results are sent with collection date only.

## Example of a Perinatal result:

The screenshot displays the eChart interface for a patient named DENBY, Colleen ANNE. The main report is titled "Perinatal Results Report (02-May-2024)". Key details include:

- Collection Date:** 02-May-2024 00:00
- Ordered By:** PHMIS KEN
- Specimen Received Date:** 02-May-2024 12:59
- Lab Type:** Blood Bank

The report includes several lab results:

- ABO Group:** A
- Rh:** Positive
- Antibody Screen, Bl...:** Negative
- Blood Group A...:** e+ K+ c+ C- E-
- Blood Bank c...:** See Medical ...

The "Medical Remarks" section contains a yellow-highlighted note: "\*\*\*\*\*SUPPLEMENTARY REPORT\*\*\*\*\* Added K+ phenotyping test and result 2024-05-02". A note below this states: "Note: The details pane displays comments and may include a SUPPLEMENTARY REPORT (shown in yellow highlight)".

When viewing Transfusion Medicine or Perinatal results in the original eChart version, comments are best viewed in print preview.
