# eChart Medications Quick Reference Guide

## Source of medication information in eChart

- Medications in eChart are provided by the Drug Program Information Network (DPIN).
- DPIN sends updates to eChart every 10 minutes.
- DPIN is a billing payment system and drug database which contains medications dispensed in retail community pharmacies. It excludes hospital pharmacies, nursing stations, ward stock, and outpatient visits at programs like CancerCare Manitoba.
- Medications have been received in eChart since April 2010.

## Category view default settings

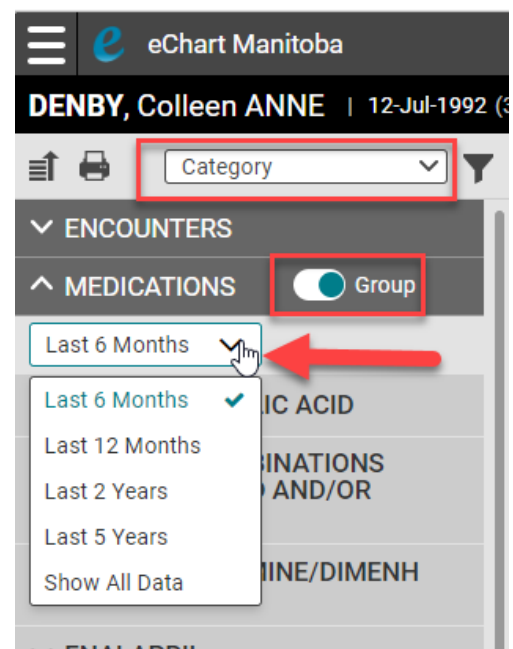

Category view retrieves medications for the last 6 months and groups the information by:

1. Anatomical Therapeutic Classification in reverse chronological order
2. Drug Identification Number (DIN) in reverse chronological order

## User configuration options

eChart provides three options to retrieve and display medication information. A user can change the amount and organization of the information by:

1. Selecting the **date range drop-down list** to retrieve medication dispensed within the date range.
2. Clicking **Group**, which changes the display to **Ungroup**, to display the most recent dispensed medication for each DIN in reverse chronological order.
3. Selecting the **Category drop-down list** and choosing "Date" to reorganize all clinical information by reverse chronological date.

## Printing medications

eChart offers two ways to print medications:

### 1. Print a single medication report

**STEP 1** Select the medication Card in the List Pane (it will turn blue when selected)

**STEP 2** Click the printer icon under the magnifying glass in the Details Pane to print a single report

### 2. Print multiple items

Multiple medications and/or items from other clinical categories can be printed at the same time.

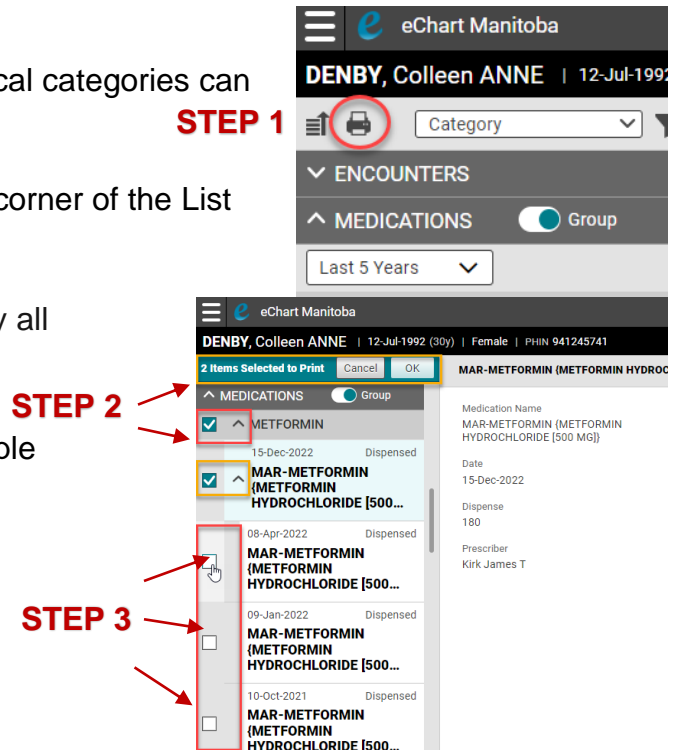

**STEP 1** Click the printer icon at the top left-hand corner of the List Pane

**STEP 2** The chevrons must be selected to display all dispensed medications within the group

**STEP 3** Select each medication box to print multiple medications grouped by a DIN

Check the number of items selected to print at the top of the List Pane and ensure all nested items are selected.
