

STI Medications are now available in eChart. There is a publicly funded drug program that makes Sexually Transmitted Infections (STI) medications available through health care providers to provide to patients free of charge. Since these medications are not dispensed by community pharmacies, the treatment is not currently captured in eChart.

To close this gap, effective March 2, 2023, STI medications entered into PHIMS will be transferred to eChart and will be accessible to health care providers.
